The PostgreSQL JDBC Interface

Table of Contents

1. Introduction

2. Setting up the JDBC Driver

Getting the Driver

Setting up the Class Path

Preparing the Database Server for JDBC

Creating a Database

3. Initializing the Driver

Importing JDBC

Loading the Driver

Connecting to the Database

Connection Parameters

4. Using SSL

Configuring the Server

Configuring the Client

Using SSL without Certificate Validation

Custom SSLSocketFactory

5. Issuing a Ouery and Processing the Result

Getting results based on a cursor

Using the Statement or PreparedStatement Interface

Using the ResultSet Interface

Performing Updates

Creating and Modifying Database Objects

6. Calling Stored Functions

Obtaining a ResultSet from a stored function

From a Function Returing SETOF type From a Function Returing a refcursor

7. Storing Binary Data

8. JDBC escapes

Escape for like escape character

Escape for outer joins

Date-time escapes

Escaped scalar functions

9. PostgreSQLTM Extensions to the JDBC API

Accessing the Extensions

Geometric Data Types

Large Objects

Listen / Notify

Server Prepared Statements

10. Using the Driver in a Multithreaded or a Servlet Environment

11. Connection Pools and Data Sources

<u>Overview</u>

<u>Application Servers: ConnectionPoolDataSource</u>

Applications: DataSource

Tomcat setup

Data Sources and JNDI

12. Further Reading

List of Tables

- 8.1. <u>Supported escaped numeric functions</u>
- 8.2. <u>Supported escaped string functions</u>
- 8.3. Supported escaped date/time functions
- 8.4. Supported escaped misc functions
- 11.1. ConnectionPoolDataSource Configuration Properties
- 11.2. <u>DataSource Implementations</u>
- 11.3. DataSource Configuration Properties
- 11.4. Additional Pooling DataSource Configuration Properties

List of Examples

- 5.1. Processing a Simple Query in JDBC
- 5.2. Setting fetch size to turn cursors on and off.
- 5.3. Deleting Rows in JDBC
- 5.4. Dropping a Table in JDBC
- 6.1. Calling a built in stored function
- 6.2. Getting SETOF type values from a function
- 6.3. Getting refcursor Value From a Function
- 6.4. Treating refcursor as a cursor name
- 7.1. Processing Binary Data in JDBC
- 8.1. Using idbc escapes
- 9.1. Using the circle datatype from JDBC
- 9.2. Receiving Notifications
- 9.3. <u>Using server side prepared statements</u>
- 11.1. DataSource Code Example
- 11.2. DataSource JNDI Code Example

Chapter 1. Introduction
